

V8463 DVD PLAYBACK CONTROLLER

Description

Designed for Traffic-Survey use, the V8463 Playback Controller overcomes the problems of controlling DVD playback while also manually enumerating the traffic flow using the image displayed. Typically, the time taken to move a hand from the manual counting mechanism to locate the remote control, then locate the correct button and depress it – can amount to several seconds, by which time the vehicle(s) under scrutiny may be out of the picture. This unit provides instant control without moving a hand from the clicker.

Using a short range RF wireless link, the unit can be located anywhere convenient on the floor such that the Enumerator can use a foot to access the 3 footpedals provided. Once the required video has been set to Play automatically (software provided), the Enumerator can depress REPLAY, PLAY or FASTFORWARD without moving his/her hands from the counter bar. The actions are as follows:

REPLAY: steps back in approx 5 second steps towards the beginning. A further depression initiates PLAY.

PLAY: normal speed play, A further depression initiates PAUSE.

FAST FORWARD: Plays back at approx 5X normal speed. A further depression initiates PLAY at normal speed.

Specification:

Dimensions: 280w x 190 x 45h

Pedals : 3 foot action toggle switches, normally open. Base includes rubber feet to prevent movement in use

Indicators: 1 x Transmission in Progress

Power: 4 x AAA standard cells, accessible by removing side and top plates using a Philips screwdriver

Frequency: 433Mhz common channel for all ATI Remote USB controllers. May be used alongside other remotes.
